

Character modding

Character modding covers character interactions in Europa Universalis V. Character interactions are actions that can be performed on or by characters such as rulers, heirs, and nobles.

Please help with verifying or updating older sections of this article.
At least some were last verified for version 1.0.

Character interactions are stored in `/Europa Universalis V/game/in_game/common/character_interactions/` as individual `.txt` files.

Character interaction structure

An interaction defines conditions, costs, and effects:

```
interaction_name = {
  message = yes                # Show notification
  is_consort_action = no      # Whether this affects consorts
  on_own_nation = yes         # Can be used within own nation

  price = price:interaction_price # Script value for cost

  price_modifier = {
    # Dynamic price adjustments
    add = 1
    if = {
      limit = { scope:recipient ?= { age_in_years > 40 } }
      subtract = {
```

```

    }
  }

  potential = {
    # Conditions for interaction to appear
  }

  allow = {
    # Conditions to enable interaction
    scope:actor = {
      has_heir = yes
    }
  }

  select_trigger = {
    # Target selection UI
    looking_for_a = character
    source = actor
    target_flag = recipient
    name = "choose_character"
    column = {
      data = name
    }
    visible = { trigger }
    enabled = { trigger }
  }

  effect = {
    # What happens when interaction is used
    scope:actor = {
      set_new_ruler = heir
    }
  }

  ai_tick = daily
  ai_tick_frequency = 120          # How often AI checks this

  ai_will_do = {
    # AI decision weight
    add = {
      desc = "REASON"
      value = some_value
    }
  }
}

```

Key attributes

Attribute	Description
message	Whether to show a notification message
is_consort_action	If true, interaction involves consorts
on_own_nation	If true, can only target own nation's characters
price	Cost to perform the interaction (uses price definition)
price_modifier	Dynamic modifications to the price
potential	Triggers for when interaction appears
allow	Triggers for when interaction can be used
effect	Effects executed when interaction is performed
ai_tick	How often AI evaluates: daily, monthly
ai_tick_frequency	Days between AI evaluations

Select trigger

Please help with verifying or updating this section. It was last verified for version 1.0.

Used to let players choose character targets:

```
select_trigger = {
  looking_for_a = character
  source = actor
  target_flag = recipient
  name = "localization_key"
  column = {
    data = name
  }
  visible = {
    scope:actor = {
      ruler != root
    }
  }
  enabled = {
    is_adult = yes
  }
}
```

Common character scopes

- `scope:actor` - The country initiating the action
- `scope:recipient` - The character being acted upon
- `root` - The current character in iteration

Example

```
grant_title = {
  message = yes
  on_own_nation = yes

  price = price:grant_title_price

  potential = {
    scope:actor = {
      government_type = government_type:monarchy
    }
  }

  allow = {
    scope:recipient = {
      is_adult = yes
      NOT = { has_title = yes }
    }
  }

  select_trigger = {
    looking_for_a = character
    source = actor
    target_flag = recipient
    name = "select_noble"
    column = {
      data = name
    }
    visible = {
      estate_type = estate_type:nobles_estate
    }
    enabled = {
      is_adult = yes
    }
  }
}
```

```
scope:recipient = {
  add_character_modifier = {
    modifier = titled_noble
    years = -1
  }
}
scope:actor = {
  add_estate_satisfaction = {
    type = estate_type:nobles_estate
    value = 0.05
  }
}
}

ai_tick = monthly
ai_tick_frequency = 60

ai_will_do = {
  add = 10
  multiply = {
    value = scope:recipient.total_abilities
    multiply = 0.01
  }
}
}
```
